# Google Cloud Print

## Business challenge

Business doesn't take place within four office walls anymore. When working remotely or away from your desk, people need a simple way to print documents from their smartphone or other mobile devices.

## Lexmark's advantage

With the Lexmark Google Cloud Print™ app, you can print from Gmail and Google Docs via your smartphone or tablet. Your documents remain in Google Cloud until you log into your Google account using the touch screen on your Lexmark printer.

## What are the advantages of the Lexmark Google Cloud Print app?

- Added document security
  - Users print documents only when they are standing at the device to release them, ensuring the confidentiality of sensitive information
- Increased productivity
  - Users can submit print jobs anytime, anywhere, and release them on any enabled device
- Good for the environment
  - Printing from the cloud reduces print volume, since documents can be printed just in time rather than just in case

## Ideal for:

- Business travellers
- Remote workers
- Users printing confidential information

## Features

**Print on-the-go.**

Upload Gmail messages or files to Google Docs and print them at your convenience.

**Easy access to Google.**

The only thing you need to begin printing from the Google Cloud is a Google account.

**Secure, efficient pull printing.**

Documents containing sensitive information are not exposed to prying eyes, mistakenly picked up, or accidentally thrown in the bin. In addition, print jobs which are no longer needed cease to be an issue—simply delete them.

**Part number:**82S0134
**Memory:**Minimum of 256MB
**Hard disk:**Not required

**Note:**A Google account is required to use this app.
