

Secure, mobile printing

Google Cloud Print

Business Challenge:

Business doesn't take place within four office walls anymore. When working remotely or away from your desk, people need a simple way to print documents from their smartphone or other mobile device.

Lexmark's Advantage:

With the Lexmark Google Cloud Print™ app, you can print from Gmail and Google Docs from your smartphone or tablet. Your documents remain in the Google Cloud until you log into your Google account using the touch screen on your Lexmark printer.

Features

Print on-the-go

Upload Gmail messages or files to Google Docs and print them at your convenience.

Ideal for:

- Business travelers
- Remote workers
- Users printing confidential information

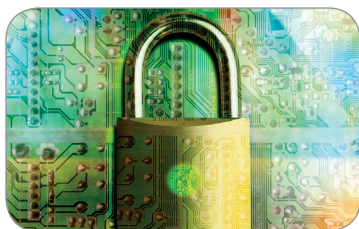

Easy access to Google

The only thing you need to begin printing from the Google Cloud is a Google account.

What are the advantages of the Lexmark Google Cloud Print app?

- **Added document security**
Users print documents only when they are standing at the device, ensuring the confidentiality of sensitive information.
- **Increased productivity**
Users can submit print jobs anytime, anywhere, and print them on any enabled device.
- **Good for the environment**
Printing from the cloud reduces print volume, since documents can be printed just in time rather than just in case.

Secure, efficient pull printing

Documents containing sensitive information are not exposed to prying eyes, mistakenly picked up by, or accidentally thrown in the trash. In addition, print jobs that are no longer needed cease to be an issue—simply delete them.

NOTE: A Google account is required to use this app.
